NARR Comments: (DJH/VCP, 12/27/17) Remedial actions (capping and vapor barrier installation) were completed as part of site redevelopment. Construction is complete, with a mixed residential and business development covering the entire site. DEQ approved a Construction Completion Report, and is awaiting EES development. DEQ Conditional NFA issued for the site on December 27, 2017. Requires ongoing cap inspection and maintenance.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Site is currently vacant, and being considered for redevelopment. Investigation starting in 2003 identified low to moderate levels of contaminants including TPH, PAHs, and metals is soil, with lesser contamination at depth. Groundwater in the far northeast site corner is impacted with volatile and semi-volatile organic compounds attributable to an off-site source. PDC has signed a letter agreement with DEQ (2012) requesting oversight of investigation and cleanup work. Additional characterization sampling (soil) requested by DEQ was completed in late 2012, and a RI/RA/FS report submitted in January 2013. Based on DEQ comments, the report was revised and resubmitted in February 2013. This report includes a proposed remedial action for the site consisting of limited soil excavation and installation of a soil vapor barrier and collection system in the northeast site corner. DEQ has approved the report, and will move forward with a staff report outlining the proposed remedy. May 1, 2013. A Record of Decision (ROD) for the site has been approved by DEQ outlining a site remedy. A Remedial Action Plan will follow at the discretion of the PDC. A Remedial Action Plan and Contaminated Media Management Plan were submitted in 2013 and approved by DEQ. In

PDC - BLOCK 8L DOWNTOWN WATERFRONT (Continued) **S112504466**

2014, the PDC indicated that site development plans had changed, eliminating the need for some subsurface soil excavation. An alternative remedy focused on capping was proposed, and determined to be acceptable. DEQ prepared a ROD Amendment in August, and public notice completed in September on the revised remedy. A revised RAP and CMMP have been received and approved by DEQ. October 2017. Remedial actions (capping and vapor barrier installation) were completed as part of site redevelopment. Construction is complete, with a mixed residential and business development covering the entire site. DEQ approved a Construction Completion Report, and is awaiting EES development. Once completed, a conditional NFA will be issued for the site. DEQ Conditional NFA issued for the site on December 27, 2017. Requires ongoing cap inspection and maintenance.

Decode for NarcdID: Remedial Action
NARR Comments: Heating oil tank located in basement of building, in public right-of-way on Glisan Street. Groundwater was encountered during decommissioning verification. Soil samples indicated high diesel concentrations in soil. Tank is currently filled with concrete. Site referred from the Heating Oil Tank Program to Site Assessment because nothing has been done about the remaining contamination. Apparent plan by owner is to move forward with cleanup in approximately 3 years when they sell the property.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [May 2016-PRS] The property is a parking lot covering Block 33, bounded by NW 4th and NW 5th Avenues on the east and west, and by NW Davis and NW Couch on the north and south, respectively. The site totals approximately 0.23 acres and has been a parking lot since the 1960's. Previously it was used for an auto body repair shop and auto body painting from the 1930 s through the 1960 s. The entire site is paved with the exception of landscaping strips on the site boundaries with adjacent city streets. Eight borings completed during a Phase II investigation in 2005, shallowest groundwater occurs at depths exceeding 30 feet below ground surface (bgs), which was the greatest depth of completed borings. Fourteen soil samples were analyzed for total petroleum hydrocarbons (TPH) by Northwest Method NWTPH-HCID. Five samples were analyzed for volatile organic compounds (VOCs) by EPA Method 8260 and metals by EPA Method 6020/7000. Four samples were analyzed for polycyclic aromatic hydrocarbons (PAHs) by EPA Method 8270 SIM. TPH and VOCs were not detected in any sample. In the five samples analyzed for metals, they were detected at levels generally consistent with background concentrations, except two samples where arsenic slightly exceeded Willamette Basin background values at 11 and 12 mg/kg, lead in one sample at 258 mg/kg and selenium in one sample at 0.8 mg/kg. In the four samples analyzed for PAHs, they were generally not detected or detected at low levels (below 51 ug/kg). A no further action determination was issued in May 2016.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

WEST SIDE AUTO BODY AND PAINT (Continued) **1018320144**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Narrative:
Narrative Id: 7609
Incident Id: 990293
Incident Narrative: E-1 WAS DISPATCHED TO A REPORT OF A TRACTOR TRAILER LEAKING FUEL FROM ONE OF ITS SADDLE TANKS. THE TRUCK DRIVER STATED HE HAD PUNCTURED THE TANK AS HE BACKED OVER A CURB. E-1 ARRIVED AND WITNESSED FUEL POURING FROM THE BOTTOMSIDE OF THE LEFT TANK AND DRAINING 8 FEET ACROSS PAVEMENT INTO A SEWER DRAIN. BYSTANDERS WERE ATTEMPTING TO DIKE THE SPILL WITH BAGS OF ABSORBANT THEY HAD ON HAND AT A NEARBY CONSTRUCTION SITE. E-1 INSERTED A WOODEN PLUG INTO THE HOLE WHICH STOPPED THE MAJORITY OF THE SPILL AND PUT A BUCKET UNDER THE PLUG TO CATCH THE RESIDUAL FUEL. BT6 AND DEQ PERSONNEL DETERMINED THERE WAS NO FUEL ENTERING THE WILLAMETTE RIVER AND THE FUEL WAS BEING CONTAINED AT A LOCAL PUMP STATION. THE DRIVER WAS INSTRUCTED NOT TO DRIVE HIS RIG UNTIL THE REMAINING FUEL WAS OFFLOADED OR HIS TRUCK WAS REPAIRED. TOTAL SPILL AT THIS POINT - 75 GALLONS. E-1 FURTHER INSTRUCTED THE DRIVER TO CONTACT A CLEANUP COMPANY FOR REMOVAL OF CONTAMINATED ABSORBENT. E-1 WENT BACK INTO SERVICE. AT 1146 HRS, E-1 WAS DISPATCHED AGAIN TO THE SAME INCIDENT. THE DRIVER STATED THE PLUG HAD COME OUT AND MORE DIESEL LEAKED INTO THE DRAIN (APPROX 40 GALLONS). E-1 REATTACHED THE PLUG, HAD A LARGE LOAD OF SOIL DELIVERED FROM THE CONSTRUCTION SITE TO FORM A DIKE AROUND THE DRAIN AND HAD BILL HENLE STANDBY UNTIL A CLEANUP CONTRACTOR ARRIVED.

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Facility ID: 2017-2304
Incident Status: Referred/Closed
Material: Sewage
Quantity: Unknown
Unit of Measure: Gallons
Release Date: 08/03/2017
Description: 2017-2304 Clatsop Co, Seaside. Phillip Patsworth (503-381-1142) reported that while kayaking near the Seaside STP he smelled a strong odor of sewage and when he stepped out of his kayak to investigate he had raw sewage on this legs, was itchy and developed a rash. Called Seaside non-emergency, who said they would follow up with Phillip. Also spoke with the after hrs sewage guy who said it was virtually impossible that there has been a leak, but acknowledged that sewage treatment plants may stink from time to time. He was leaving to drive out to investigate but will only call back if he verifies a release.
He will also call his sewage permit writers tomorrow to report his findings.

Release Date: 08/04/2017
Description: 2017-2306 Multnomah, Portland. Gary Rivera (503-988-3455) who is the operator of the Burnside Bridge noticed that the Willamette appears to have a cloudy sheen on it from an unknown source. He noted that a

(Continued) **S121171160**

cargo ship is nearby but he has no information to link the sheen and the vessel. He described the sheen as clouds on the water, a vague discoloration. I suspect natural phenomenon as Portland is experiencing hazy atmospheric conditions, and this sighting was at 2 am.

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Updated Date: 10/12/2015
Decode for NarcdID: Contamination
NARR Comments: (10/08/2015 KPD/ICP) Groundwater samples collected to the south of Block 75 in 1998 and 1999 identified a plume of PCE that appeared to originate on the Block. Soil samples collected on Block 75 in July 2004 found virtually no contamination of any kind. However, soil gas samples collected in November 2013 showed a plume of PCE extending roughly from the center of the Block to the southeast corner. PCE was also detected in on-site groundwater samples in October 2014.

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Soils at the site were generally described as sandy silts to about 20 ft bgs, grading to silty and sandy gravels below 30 ft bgs. The gravels extend to at least 75 ft bgs. Groundwater was encountered roughly 40 ft bgs and flows southwest. The nearest surface water body is the Willamette River, about 750 feet west of the site. The site and surrounding properties are currently zoned Central Employment with a design overlay (EXd) by the City of Portland.

Updated Date: 10/12/2015
Decode for NarcdID: Remedial Action
NARR Comments: (10/08/2015 KPD/ICP) Redevelopment of the site began the last week of December 2014. Within days three former cesspools were discovered on the south half of the block. The cesspools were 3 ft in diameter, brick-lined, and extended to groundwater. Sediments at the bottom of the cesspools were contaminated with oil and metals. A total of 20.34 tons of sediments were vacuumed or augured out of the cesspools and shipped to the Hillsboro Landfill for disposal. Approximately 24,000 cubic yards of soil were excavated up to 22 ft bgs from the south half of the block and shipped to the Portside Lagoon and Landfill in Vancouver for disposal. No evidence of soil contamination (such as odors or staining) was observed during the excavations. Elevated concentrations of arsenic and lead remain at the bottom of one of the cesspools, and elevated concentrations of arsenic were detected in a composite surface soil sample from a parcel of former right-of-way immediately south of the block. However, DEQ has determined that the arsenic and lead at the bottom of the cesspool are too deep and too limited in extent to pose a direct contact risk, and the former right-of-way will be capped by the City of Portland to prevent contact with arsenic in the surface soils. DEQ also determined that the PCE concentrations in soil gas and groundwater did not pose an unacceptable risk to human health or the environment.

NARR ID: 5755358
NARR Code: Health Threats
Created By: KDANA
Created Date: 10/16/2014
Updated By: KDANA
Updated Date: 10/16/2014
Decode for NarcdID: Health Threats
NARR Comments: No unacceptable risks have been identified from the contamination at the site. The soil gas concentrations are well below DEQ's risk-based concentrations, and groundwater in the area is not used as a drinking water source.

BLOCK 75 (Continued) **S116734847**

NARR Comments: Approximately 11 residences were present at the site as of 1889. The residences began to be removed in the mid-1930s. By 1950 all of the residences had been removed, and a building was constructed in the SW quarter of the block. The building was variously used for automotive maintenance, motorcycle assembly, and delivery vehicle maintenance. A second building was constructed in the SE quarter of the block in 1970. The building was used as a motorcycle repair shop in the 1970s, as an automotive paint mixing and matching facility in the 1980s and 1990s, and as a bakery and restaurant in the 2000s. Both buildings were torn down in 2008, and the site remained vacant until construction of the current building began in 2015.

NARR Comments: Petroleum hydrocarbons and related constituents including PAHs and VOCs. An plume of PCE extends through the site, but was determined to emanate from north of the site and is not attributable to any site activities. Minor impacts to both soil and shallow groundwater have been observed at the site.

NARR Comments: Removal of contaminated soil associated with the former UNOCAL station was completed in 1988 and 1992. USTs associated with this area (southwest portion of site) received a DEQ NFA in 1994.

BLOCK 76/67 SITE (Continued) **S106044950**

Following review of soil and groundwater investigation work complete at the site through 2005, DEQ Northwest Region Cleanup Program determinated that remaining soil and groundwater contamination at the site (minor) does not pose a risk to public health or the environment. An NFA was issued in May 2006. Three to four petroleum USTs remained at the site as of June 2006; the PDC agreed to decommission the tanks per UST rules as part of upcoming site development work. A Soil Management Plan was also prepared to address handling of any <quot>lightly-contaminated soil<quot> that will be removed from the site as part of site development work.

Decode for NarcdID: Remedial Action
NARR Comments: A Remedial Investigation Report was issued for the site in August 2005 which presents the results of soil and groundwater sampling completed at the site, during which generally low levels of petroleum hydrocarbons and constituents were detected in soil and groundwater. The primary source of the releases was a UNOCAL station that formerly was located on Block 76. Site work included soil removal associated w/ UNOCAL USTs. DEQ reviewed the report under DEQ's ICP, and in a closeout memo dated March 15, 2006 determined that no additional site action was warranted, as remaining contaminants were below risk-based concentrations. Four known or suspected USTs remain at the site which will be addressed by the PDC or the site developer as part of site development work. DEQ received a commitment from the PDC (Dave Obern) to do the work in a letter dated November 25, 2005, a copy of which is attached to the site NFA letter. The NFA was issued on May 30, 2006 following a 30-day public comment period. No comment was received. USTs were subsequently addressed in 2008, with approval by DEQ LUST program in 2009 (see Webdocs 2009 NFA). Site environmental work is therefore considered complete.

Updated Date: 06/05/2006
Decode for NarcdID: Water Use (Current/Reasonably Likely)
NARR Comments: As part of the 2005 Remedial Investigation Report prepared by Hart Crowser for the site, a BWUD was completed. Shallow groundwater at and in the immediate vicinity of the site was determined to have no current or reasonably likely beneficial use other than recharge of deeper aquifers and the Willamette River. Deeper groundwater in the site vicinity could potentially be used for industrial or irrigation purposes, however site contaminants are generally <quot>floaters<quot> (lighter than water) and not expected to migrate deeper to any appreciable amount. Site contaminants have not migrated a significant distance off-site and therefore are not expected to impact the Willamette River.

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Property Description:	This property was part of the former East Portland Gas Works which operated from the late 1800s through the early 1920s. Historical records show that the site once contained a 300,000 cubic foot

EAST PORTLAND GAS WORKS - GAS HOLDER TANK SITE (Continued) **1016456677**

capacity gas storage holding tank. Cyanide is a common contaminant associated with this type of use. According to aerial photographs the gas holder tank was removed between 1936 and 1984. The Fishels Furniture store has operated out of this building since 1945.

Environmental Interest/Information System

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

NARR Comments: (CWH/CU 3/22/13) Site is developed as parking lot for adjacent building. Lot is leveled but is raised above a downhill sloping street. The SE Ankeny Street and SE 3rd Avenue corner of the lot appears to be a remnant of an outer concrete wall of the former circular gas holder tank. The surrounding area is primarily commercial and warehouse uses, with some light industrial use nearby.

NARR Comments: NOTE: This site was originally evaluated in DEQ Site Assessment under the East Portland Gas Works site (ECSI #4426). In March 2013, DEQ separated this tax lot - 400 from the larger site and renamed it Former Gas Holder Tank Site. The 300,000 cubic foot gas holder tank on this site was never used in conjunction with the East Portland Gas Works (EPGW) site. The 300,000 gas holder tank was constructed after 1901 and the EPGW site stopped operating in 1892. (CWH/CU 11/13/13) The Former Gas Holder Tank site once hosted a 300,000 cubic foot gas holder tank that received manufactured natural gas from a gas works that operated on a property on the west side of the Willamette River (Former Portand Gas Manufacturing Site, ECSI #1138). According to records, an adjacent gas plant, East Portland Gas Works, ceased operation around 1892. Records indicate that the holder tank was constructed sometime between 1900 and 1909 and used until around 1924. Sometime in the 1940s, the 300,000 cubic foot tank was demolished. In the 1950 s relatives of the current owners purchased the property plus surrounding properties and established a furniture store. The former holder tank property, located in the southwest corner of the block, was and continues to be used for parking.

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: In May 2017, apparently contaminated soil was observed in the City of Portland right-of-way, near the southwest building corner, during excavating for building renovations. No evidence of underground storage tanks (e.g., supply lines, vent pipes) was observed during the excavation. Point Source Solutions provided oversight during removal of 45.5 tons of soil, and subsequent site characterization sampling and reporting. The soil was disposed at a permitted solid waste landfill. A soil sample of apparently contaminated soil (SE1@5.5 bgs) was collected to characterize the contamination. The sample contained 775 milligrams per kilogram (mg/kg) of gasoline-range petroleum hydrocarbons. Diesel- and heavy oil-range hydrocarbons were not detected. The sample also was tested for volatile organic compounds (VOCs) and selected metals. The highest VOC concentration was reported for naphthalene (0.759 mg/kg). Lead

TOWNE STORAGE PROPERTY (Continued) **S120851236**

was detected at 41 mg/kg. Soil in the SE-1 area was removed. Petroleum-range hydrocarbons were not detected in sample locations SE-2, SE-3 and SE-4. A sample of perched groundwater observed at a depth of 8 feet in the excavation also was tested for petroleum-related contamination. Gasoline-range petroleum hydrocarbons were detected at 856 micrograms per Liter (ug/L); detected VOCs included 1,2,4- and 1,3,5-tri-methylbenzene, ethylbenzene, xylenes and naphthalene. Naphthalene was detected at 68.6 ug/L; other VOCs were detected at less than 20 ug/L. Additional investigation was conducted in June 2017 to determine the extent of contamination and included advancing four soil borings (SB5 through SB8) for soil testing, and collecting a soil gas sample (SV1). Seven samples were collected for testing. Petroleum-range hydrocarbon detections were limited to SB7, where 590 mg/kg gasoline-range hydrocarbons was reported for the sample collected at a depth of 5.5 feet. VOCs were detected at somewhat higher levels than in previous testing. Naphthalene was detected at 7.68 mg/kg; 1,2,4- and 1,3,5-trimethylbenzene were detected at 0.446 and 0.215 mg/kg, respectively. The soil gas sample was collected near the building, adjacent to where the suspected highest levels of contamination remained. Gasoline-range hydrocarbons were detected at a concentration of 1,600 micrograms per meter cubed (ug/m3). VOCs, including benzene, toluene, ethylbenzene, xylenes, 1,2,4-trimethylbenzene, and naphthalene were detected at relatively low concentrations of less than 40 ug/m3. Residual soil contamination exists at depths between about 3 and 8 feet over a 60 square foot area, with an estimated volume of 3.75 cubic yards. Concentrations in soil and groundwater are below applicable DEQ risk-based concentrations (RBCs) for direct contact under urban residential and occupational exposure scenarios. Soil gas testing showed that residual contamination does not present a risk through vapor intrusion.

Decode for NarcdID: General Site Description
NARR Comments: The Site property is located at 17 SE 3rd Avenue in Portland. A four-story brick, mixed-use building constructed in 1915 occupies most of the 0.46-acre property. The building abuts the southern property boundary. The building was used as a warehouse for many years.

Decode for NarcdID: Land Use (Current/Reasonably Likely)
NARR Comments: The site property is zoned Central Employment (EX), with Historic Resource Protection overlays. The zone allows mixed-uses and is intended for areas in the center of the City that have predominantly industrial type development. The intent of the zone is to allow

TOWNE STORAGE PROPERTY (Continued) **S120851236**

industrial, business, and service uses which need a central location. Residential uses are allowed, but are not intended to predominate or set development standards for other uses in the area. Residential development, if it were to occur, would likely be second-story and higher apartments or condominiums, consistent with DEQ s urban residential exposure scenario.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

FINDS:

Registry ID: 110059774481

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport,

MULTNOMAH CO BRDG SEC BURNSIDE BRIDGE (Continued) **1016305568**

and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

work in 2011 and 2011. DEQ concluded that no further action is needed. DEQ's staff report in support of this conclusion is attached. (August 23, 2011, Bob Schwarz) DEQ proposed a No Further Action determination for this site. Notice of the proposed No Further Action determination was published in the Oregonian and in the Secretary of State s Bulletin on July 1, 2011. Comments were requested by August 1, 2011. No comments were received. DEQ therefore issued the No Further Action determination on August 18, 2011. A copy of attached.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Incident Status:	Closed
Material:	Oil - Other
Quantity:	.5
Unit of Measure:	Gallons
Release Date:	12/04/2014
Description:	Portland Fire and Rescue reported encountering a sheen approximately 50’X10’ on the Willamette River, just downstream of the Morrison Bridge in Portland. The sheen was weathered and looked like it was breaking up. The reporting party guessed that the recent deluge of rainfall had dislodged some old street runoff oil from a storm drain.

(Continued) **S117402839**

Checking nearby outfalls failed to find a source of the spill however.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the

MULTNOMAH COUNTY HEALTH DEPARTMENT HEADQUARTERS (Continued) **1024229962**

discharge does not adversely affect water quality.

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Narrative:
NARR ID: 5741512
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 11/26/2003
Decode for NarcdID: Contamination
NARR Comments: (7/5/01 MTP/VCP) A Phase I, Phase II with sampling, and pre-Remedial (Pre-RI) investigations have been conducted at the site. The Phase I report provides a comprehensive survey of historic site activities and identified former service stations, and possible USTs associated with the stations and/or the hotels as possible contaminant sources. Soil and groundwater sampling conducted in the Phase II and Pre-RI investigations showed that imported fill (PAHs, metals) and the service stations (VOCs, PAHs) were contaminant sources at the site. (4/1/02, MTP) Additional investigation conducted in March 2002 further refined the extent of contamination. VOCs were not detected at levels of concern. A number of PAHs, lead and arsenic, gasoline and heavy oil have been identified as contaminants of concern, and will be evaluated in the proposed risk assessment. Based on no anticipated beneficial use of shallow groundwater, and because deep groundwater is not expected to be impacted, the groundwater pathway does not appear to be complete.

NARR Comments: The site has been a parking lot since 1963. Portions of the site were developed as early as 1889 (Union Fuel Company coal shed). A number of service stations were present at the site from the mid-1920s to the 1960s. Boyd's Hotel (1930s - 1960) and the Olympic Hotel (1930s - 1942) also operated at the site. The property was acquired from the United States Postal Service in 1990.

NARR Comments: Petroleum products, including gas and oil from service stations; imported fill appears to also be a source of petroleum-related compounds and metals. Elevated lead was observed in a debris layer described as the <quot>burn layer<quot>. Elevated arsenic was observed in backfill soils greater than 4' below grade.

Updated By: GWISTAR
Updated Date: 05/13/2013
Decode for NarcdID: Pathways & Other Hazards
NARR Comments: The primary exposure pathway appears to be direct contact, incidental ingestion/inhalation of occupational site workers to polynuclear aromatic hydrocarbons (PAHs) and metals including arsenic and lead. Direct exposure of site utility/trench workers to contaminated surface and subsurface soil may be possible. Relatively low concentrations of volatile organic compounds (VOCs) in groundwater do not appear to pose a threat to the Willamette River, but are present at concentrations above EPA Region 9 Preliminary Remediation Goals (PRGs) for tap water. There are no known beneficial uses of groundwater in the locality of the facility.

NARR Comments: (7/5/01 MTP/VCP) PDC completed a Pre-RI report in March 2001, and joined DEQ's Voluntary Cleanup Program for review of site reports and determination of the <quot>no further action<quot> status at the site. PDC has indicated that site characterization is complete and that a limited soil removal and/or capping of impacted soil would be protective of human health and the environment. DEQ began review of the site documents in June 2001 and is preparing comments. (4/1/03 MTP/VCP) DEQ determined that further site characterization was required, and presented a scope of work for additional field investigation in a memorandum dated July 19, 2001. Additional investigation was conducted in March 10, 2002, consisting of advancing 11 direct-push borings to obtain soil and groundwater samples. DEQ reviewed and approved the resulting RI report. PDC is now proceeding with a risk assessment. (3/14/05 MTP) Due to limited funding, PDC is not conducting work on Parcel U, but has completed additional investigation on the adjacent site, block R (ECSI #3103). (Jan-Feb, 2009) Burn layer and petroleum hydrocarbon contaminated soils were excavated and disposed of off-site. A small gasoline UST was discovered during excavation but was closed out under the ICP program pathway rather than Tanks referral. (November 2009) E&ES filed with the County. Site was issued a Conditional NFA by the DEQ. (August 2016 RKW) Multnomah County is planning to develop a new building on the east portion of the site; it will be the Multnomah County Health Department Headquarters. Ground breaking is expected in fall 2016. (October 2016 RKW) Soil and groundwater prescreening work revealed only minor arsenic contamination in both soil and groundwater.

NARR Comments: 11/02/2009 - an Easement and Equitable Servitude was filed with Multnomah County (document # 2009-152667). This E&ES requires special management of soils greater than 4' below grade at the site (including notification to DEQ of disturbance of such). An Updated CMMP was completed and referenced in the E&ES for handling of such soils.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility ID:	2004-2437
Incident Status:	Archive
Material:	Not reported
Quantity:	30
Unit of Measure:	Gallons
Release Date:	10/25/2004
Description:	PGE reported a 30 gallon transformer oil spill into a storm drain that runs into the Willamette River 5 blocks away. Transformer was mounted on a pole, developed a small hole due to an electrical short and leaked onto the ground. It was inspected in the late evening and the hole was not detected in the dark. The hole and leak was discovered the at about 1432 the following day and absorbent pads were applied. However, most of the oil had run off the asphalt pad and into the storm drain. PCBs at 31 ppm.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Created Date: 12/17/2002
Updated By: Not reported
Updated Date: 12/17/2002
Decode for NarcdID: Contamination
NARR Comments: In 1987, the Portland Development Commission purchased approximately 17 city blocks in inner northeast Portland to make way for the Oregon Convention Center. Rose City Plating Works had been operating on one of those blocks since 1944. Investigations in 1988 found soil and groundwater contamination at the Rose City site. Soil contamination extended as much as 32 feet below the surface. Close to 1600 tons of contaminated soil and debris were removed from the site and properly disposed of. DEQ signed off on the cleanup, and construction of the convention center was completed in 1989. Rose City Plating, meanwhile, relocated its operations to 7884 SE 13th Ave., in the Sellwood district of Portland. (See ECSI #269 for more information on the Rose City Plating II site.)

Decode for NarcdID: Pathways & Other Hazards
NARR Comments: Soils at the site consist of a mixture of silts, sands, and gravels, generally grading from silts near the surface to gravels at depth. The water table is approximately 60 feet below the site; the groundwater flow direction appears to be to the south-southwest. The site is now completely built over/paved over.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

AIR EMISSIONS CLASSIFICATION UNKNOWN

US EPA TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

US EPA Risk Management Plan (RMP) database stores the risk management plans reported by companies that handle, manufacture, use, or store certain flammable or toxic substances, as required under section 112(r) of the Clean Air Act (CAA).

Environmental Interest/Information System

LAND ROVER PORTLAND (Continued) **1004771717**

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Temperature of The Hazardous Substance Code:	4
Temperature Description:	Not reported
Temperature of The Hazardous Substance Code:	Not reported
Days Hazardous Substance On Site During Year:	120
Is The Substance Protected A Trade Secret:	False
Description Of The Max Qnty Code:	500-999
Description Of The Avg Qnty Code:	200-499
Most Hazardous Ingridient:	VARIOUS
United Nations/north America 4 Digit Class Number:	Not reported
Hazard Rank:	1
EHS Ingredient:	NONE LISTED ON MSDS
Substance Pure:	False
Substance Mix:	True
First Hazardous Class Code For Chemical:	Acute Health Hazard
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported

Chemical:

Chemical Name:	FERTILIZER NPK
United Nations/north America 4 Digit Class Number:	Not reported
Chemical Abstract Service Identifier Number:	Not reported
Chemical Is Extremely Hazardous Substance (EHS):	N
First Hazardous Class Code For Chemical:	Acute Health Hazard
Second Hazardous Class Code For Chemical:	Not reported
Third Hazardous Class Code For Chemical:	Not reported
Hazard Class 1 Of The Chemical:	6.3
Hazard Class 2 Of The Chemical:	Not reported
Hazard Class 3 Of The Chemical:	Not reported
Chemical Is A Toxic 313 Chemical:	N
EPA Pesticide Registration Number:	Not reported
Contains 112R:	N
Contains EHS:	N
Fertilizer:	Y
Pesticide:	N
Contains 313:	N

Chemical Name:	LEAD ACID BATTERIES
Physical Description:	SOLID
Case Number:	Not reported
Facility Id:	120750
Physical State Of The Substance:	1
Avag Amt Possessed During Year CD:	11
Max Amt Possessed During Year CD:	11
Applicable Unit Of Measure Code:	1

TARGET CORPORATION (Continued) **S117395228**

Description Of The Unit Of Measure:	POUNDS
Type Code:	R
Description:	OTHER
Type Code:	Not reported
Temperature Description:	Not reported
Pressure of Code:	1
Pressure Description:	NORMAL PRESSURE
Pressure of Code:	Not reported
Pressure Description:	Not reported
Temperature Description:	NORMAL TEMPERATURE

Biennial Reports:

Last Biennial Reporting Year: 2017

Annual Waste Handled:
Waste code: D001
Waste name: IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET, WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.
Amount (Lbs): 1456

Waste code: D002
Waste name: A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Incident Id: 040165
Incident Narrative: Team 6 called to assist FBI - a threatening letter was mailed to the Columbia River Tribal Fish Commission - they opened it and witnesses thought that they saw a powdery substance fall from envelope - called Police - they call FBI - they called Team 6. We arrived and conferred with Jeff Pritchard and Ed Marshman (FBI agents in charge). They suited up two agents and we suited up two firefighters in TyVek suits and SCBAs. Entered and acquired letter in question from office area. Tested letter for radiation and placed in sealed plastic bag. Decontaminated all entry personnel - picked up and returned to service. Left FBI in charge of scene - they are sending letter to State Crime Lab for testing.

Description:	Dave Mastros, Oregon DEQ emergency response staff, who also works for the USCG, went out to look at the drum, reported by DANIEL MURPHY, DEQ employee. The drum was an empty rusted out 55-gallon drum, that had holes in it an no lid. It was laying on its side beneath the Steel Bridge. USCG is not going to collect the drum, and give the condition it does not pose a risk to the river or environment. Closed by Geoff Brown 6/29/16.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

NARR Comments: (12/15/11 KJR/VCP) A Phase One Environmental Site Assessment (ESA) was completed for the site in January 2011. The single story commercial building was constructed in 1921. The building covers the entire property. Tenants of the building have included various vehicle repair businesses and is currently occupied by an auto body shop. The site is bounded by commercial or apartment properties with buildings dating back to 1908 to 1931. The recognized environmental conditions (RECs) identified during the Phase One ESA are summarized below. The property has been occupied by various vehicle repair businesses. These businesses generate various waste products. Two open floor drains were observed and videoed. The drains are connected to the municipal system but the connections may have been compromised. Another floor drain was filled by a previous tenant. A

SPIKES AUTO UPHOLSTERY BUILDING (FORMER) (Continued) **S110818318**

concrete patch in the north bay was noted and was reportedly a former pit for hydraulic lifts. The hydraulic lifts were removed in 1991. A photo finishing/graphic business was previously located on the property adjacent to and northeast of the site from 1970 to 2005. The site is located in the presumed down gradient direction from former photo finishing/graphic business property.

NARR Comments: (12/15/11 KJR/VCP) A site investigation was performed in February 2011 to evaluate site conditions related to the RECs identified during the Phase One ESA. A geophysical survey was completed prior to subsurface explorations to identify the location of drain lines connecting the floor drains. Four soil borings were advanced to depths of 24 feet below ground surface (bgs) within the site building (see Figure 2). Groundwater was encountered between 18 feet and 18.5 feet bgs. Boring SB-1 was advanced in the west portion of the south service bay. Boring SB-2 was advanced adjacent to the floor drain located in the west portion of the south service bay. Boring SB-3 was advanced adjacent to a service pit located in the east portion of the north service bay. Boring SB-4 was advanced adjacent to the juncture

SPIKES AUTO UPHOLSTERY BUILDING (FORMER) (Continued) **S110818318**

of the drain lines from each of the floor drains observed within the building. One soil sample and one groundwater sample were collected from each of the four borings. The soil sample from boring SB-1 was collected at 16 feet bgs, near the soil/groundwater interface. The soil samples from borings SB-2, SB-3, and SB-4 were collected at depths of 8 feet, 10 feet, and 8 feet bgs, respectively. The samples were collected at depth to evaluate the drain lines and floor drains. All soil and groundwater samples were analyzed for hydrocarbon identification, volatile organic compounds (VOCs), and total RCRA eight metals. Concentrations of total petroleum hydrocarbons and VOCs were not detected in the four soil samples above the laboratory reporting limits. Concentrations of arsenic (5.9 milligrams per kilogram (mg/kg), 6.0 mg/kg), barium (160 mg/kg to 220 mg/kg), chromium (14 mg/kg to 25 mg/kg), and/or lead (11 mg/kg to 14 mg/kg) were detected in the soil samples. Concentrations of total petroleum hydrocarbons were not detected in any of the four groundwater samples. Concentrations of VOCs were not detected in the groundwater from boring SB-1. Concentrations of tetrachloroethene (PCE) were detected in groundwater samples from borings SB-2 (1.1 micrograms per liter (ug/l)), SB-3 (1.0 ug/l), and SB-4 (1.1 ug/l) at or just above the laboratory reporting limit of 1.0 ug/l. Concentrations of other VOCs were not detected in the four groundwater samples. Concentrations of the following total metals were detected in one or more groundwater samples: arsenic (4.3 ug/l, 5.7 ug/l), barium (290 ug/l to 870 ug/l), and lead (6.1 ug/l). (1/4/12 KJR/VCP) NFA issued for site on 1/4/12. no remedial actions required. Select site documents maybe viewed in the site documents section of this database.

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Description:	Kadalyst reported a possible spill of paint thinner that caused an odor so strong he had to send his workers home. The property management company/Downtown Development Group/Randi/503-489-2323 x1 had an employee spill something that smelled like paint thinner and then attempted to clean it up by using water. A drain was impacted, unknown where that drain leads. The caller wants to know if it is safe for his employees can come back to work tomorrow or if they need to stay home. He would like contact as he has questions regarding the situation.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

NCDB (National Compliance Data Base) supports implementation of the Federal Insecticide, Fungicide, and Rodenticide Act (FIFRA) and the Toxic Substances Control Act (TSCA). The system tracks inspections in regions and states with cooperative agreements, enforcement actions, and settlements.

US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

FINDS:

Registry ID: 110004781745

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Facility ID:	2016-2624
Incident Status:	Closed
Material:	Oil - Hydraulic
Quantity:	Not reported
Unit of Measure:	None
Release Date:	10/28/2016
Description:	Received notification of a hydraulic oil spill that occurred when a hydraulic hose failed, spilling the oil to the ground. There were no waterways or storm drains impacted. The spill was immediately cleaned up but they are calling in a vacuum truck and will vacuum out a catch basin that was nearby as a precautionary measure.

Narrative:
NARR ID: 5734803
NARR Code: Contamination
Created By: Not reported
Created Date: 12/17/2002
Updated By: GWISTAR
Updated Date: 06/27/2003
Decode for NarcdID: Contamination
NARR Comments: The facility's underground fuel tanks were removed in 1992 when the site's owners initiated environmental investigations of the property. In addition to finding soil contamination associated with the UST system, the 1992 evaluations turned up hydrocarbon contamination in the vicinity of two wash racks/sumps. Wash rack removal and some soil excavation/removal occurred at the site in 1994. DEQ's UST Section has provided oversight for the UST-related contamination (log #26-92-0083), but referred the wash rack contamination to Site Assessment in 9/94. None of the soil excavations or borings has encountered any groundwater. Contaminants associated with soil beneath the former wash racks are primarily diesel and heavier petroleum compounds.

NARR Comments: The 3/92 UST removal resulted in the stockpiling within the building of about 83 tons of petroleum-contaminated soil, which were later disposed of off-site. There appear to be low levels of residual soil contamination in the former UST areas (see LUST file #26-92-0083 in DEQ's Northwest Region office). Removal of the wash racks in 1994 involved pumping emulsified oily water into 28 55-gallon drums and then excavating 174 tons of contaminated soil. The contractor doing this work left pockets of contaminated soil in place in both the north and south wash rack areas, citing the possibility that further excavation would cause structural damage to the building. Contaminants remaining in the ground include gasoline, diesel, and heavy oil. There are also low concentrations of several polynuclear aromatic hydrocarbons (PAHs) and at least two chlorinated solvents. The most applicable exposure pathway at this site is likely to be direct contact with soil, especially if the site is redeveloped. As long as the building remains as is, Site Assessment recommends maintaining the long-term institutional control barrier between subsurface soils and any persons occupying the site. Cleanup of residual pockets of contaminated soil should accompany any redevelopment of the site. Party joined VCP in 3/95 to obtain oversight for evaluation of pockets remaining in wash rack area. VCS review concluded that pockets were limited and excavation posed threat to building structure. NFA recommended with deed notice reflecting need for further work should building structures be removed. Public comment period held and NFA finalized 6/95. (9/21/99

STAGES BUILDING (Continued) **U001150053**

JLS/VCP) Site redevelopment caused existing structures at the site to be demolished, providing access to pockets of contamination on the property. The No Further Action (NFA) determination is no longer in effect. (10/2/00 ACV/VCP) Pockets of contamination re-accessed and removed. No residual contamination remains on-site, and DEQ re-issued an NFA letter in August 2000.

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

Environmental Interest/Information System

OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Handler Activities Summary:
U.S. importer of hazardous waste: No
Mixed waste (haz. and radioactive): No
Recycler of hazardous waste: No
Transporter of hazardous waste: No
Treater, storer or disposer of HW: No
Underground injection activity: No
On-site burner exemption: No
Furnace exemption: No
Used oil fuel burner: No
Used oil processor: No
User oil refiner: No
Used oil fuel marketer to burner: No
Used oil Specification marketer: No
Used oil transfer facility: No
Used oil transporter: No

Historical Generators:
Date form received by agency: 05/30/2003
Site name: OREGON SQUARE

WHITE POWDER (Continued) **1005444617**

Classification: Not a generator, verified

Date form received by agency: 05/16/2002

Classification: Not a generator, verified

Hazardous Waste Summary:

. Waste code: NA
. Waste name: NA

Violation Status: No violations found

FINDS:

Registry ID: 110012566204

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Hazardous Waste Summary:

. Waste code: NONE
. Waste name: None

Violation Status: No violations found

FINDS:

Registry ID: 110007741809

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

BULLIVANT HOUSER BAILEY (Continued) **1004771977**

corrective action activities required under RCRA.

Hazardous Waste Summary:

. Waste code: NA
. Waste name: NA

Violation Status: No violations found

FINDS:

Registry ID: 110045420255

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

RITE AID 6467 (Continued) **1014959088**

corrective action activities required under RCRA.

Click this hyperlink while viewing on your computer to access additional FINDS: detail in the EDR Site Report.

NARR Comments: [Sept. 2013] The service station operated until about 1980, and the tanks were eventually removed in 1994. During decommissioning, no contamination was observed in the open pit or detected by chemical analysis in confirmation soil samples. In 2012, a Phase II environmental investigation was done at the site, due to historical uses of the property and past storage of motor fuels. During the Phase II work, gasoline was detected in soil at levels suggesting vapor migration into planned residential buildings could significantly degrade indoor air quality and expose occupants to an unacceptable risk. Soil gas samples were collected, and the highest levels of gasoline and benzene vapors detected at the site were below their respective soil vapor screening values. Based on this data, DEQ concluded that remaining petroleum contamination posed no significant or unacceptable risks to future occupants of the site.

Hazmat Story of Release:	1
Remark:	HM7 was called to a HazMat spill by E1 at 715 NW Hoyt St. The building involved was the main USPS transfer facility in Portland. HM7 arrived on scene at 2340hrs. and was assigned to the HazMat branch. HM7 was briefed by the Hazmat Branch Director (C2) of the situation, which was as follows:A package had arrived to the facility from the airport that was leaking a viscous, reddish liquid with a pungent order. The package was discovered after it had been loaded into a roll cart with other packages and then moved a distance of about a hundred feet through the facility. Some small puddling and dripping did occur on the concrete flooring as the cart was moved through the facility. When the pakage was discovered it was noted by employees to have been over packed in a cloth bag and it had seemed that the liquid had ''eaten though'' the bag. At this time employees backed out and called 911. E1 was sent on the initial alarm as a HazMat investigation. E1 donned turnouts and SCBA's but did not mask up on initial entry, however, they were conducting air monitoring. E1 was able to locate the bin that the package was in and did visualize the puddles and drips on the floor. Upon arriving at the bin, E1 was able to smell the product and backed out. Simulteneously, E1's officer was gathering information from employees and learned that an employee at the airport had been sent to the hospital after contact with the product. Apparently the product had gotten on his jeans and started eating away the material. He was sent to the hospital following USPS SOP's. It was at this time that the descision to upgrade to a Level II HazMat response was made. E1 secured the area

(Continued) **S117734347**

until our arrival. After HM7's arrival, we completed a recon of the area and began formulating our course of action. Our first task was to ID the product. With information collected to this point we felt comfortable to use level C PPE and simply opening the package to see if it was in a container with identifying marks. As our entry and back-up team prepared, our resource team was able to use gathered information to come to a strong presumption that the product may be oleum, having a main active ingredient sulfuric acid. Our entry team entered the facility on air and was able to get a pH from the first puddle. The pH was a strong acid. Air monitoring was also conducted throughout the entry. The entry team was joined by Brendan T. Soennecken, a Postal Inspector, for documentation purposes. Mr. Soennecken was in a level B splash suit and PAPR. The entry team was able to seperate clean packages from contaminated packages as they looked for the leaking one. Contaminated packages were gathered on a peice of visqueen on the floor. Once located, the package in question was opened and two 64oz. bottles of RotoClean were found, one with a broken lid. The main active ingredient in RotoClean was sulfiric acid. At this time it was decided to return the contaminated packages to the contaminated cart where they would remain until a clean-up company arrived on site. USPS personnel already were in touch with the clean-up company. HM7 spread acid nuetralizer to contaminated areas before turning the scene back over to USPS personnel.

Remark:	HM7 was called to a HazMat spill by E1 at 715 NW Hoyt St. The building involved was the main USPS transfer facility in Portland. HM7 arrived on scene at 2340hrs. and was assigned to the HazMat branch. HM7 was briefed by the Hazmat Branch Director (C2) of the situation, which was as follows:A package had arrived to the facility from the airport that was leaking a viscous, reddish liquid with a pungent order. The package was discovered after it had been loaded into a roll cart with other packages and then moved a distance of about a hundred feet through the facility. Some small puddling and dripping did occur on the concrete flooring as the cart was moved through the facility. When the pakage was discovered it was noted by employees to have been over packed in a cloth bag and it had seemed that the liquid had ''eaten though'' the bag. At this time employees backed out and called 911. E1 was sent on the initial alarm as a HazMat investigation. E1 donned turnouts and SCBA's but did not mask up on initial entry, however, they were conducting air monitoring. E1 was able to locate the bin that the package was in and did visualize the puddles and drips on the floor. Upon arriving at the bin, E1 was able to smell the product and backed out. Simulteneously, E1's officer was gathering information from employees and learned that an employee at the airport had been sent to the hospital after contact with the product. Apparently the product had gotten on his jeans and started eating away the material. He was sent to the hospital following USPS SOP's. It was at this time that the descision to upgrade to a Level II HazMat response was made. E1 secured the area until our arrival. After HM7's arrival, we completed a recon of the area and began formulating our course of action. Our first task was to ID the product. With information collected to this point we felt comfortable to use level C PPE and simply opening the package to see if it was in a container with identifying marks. As our entry and back-up team prepared, our resource team was able to use gathered information to come to a strong presumption that the product may be oleum, having a main active ingredient sulfuric acid. Our entry team entered the facility on air and was able to get a pH from the first puddle. The pH was a strong acid. Air monitoring was also conducted throughout the entry. The entry team was joined by Brendan T. Soennecken, a Postal Inspector, for documentation purposes. Mr. Soennecken was in a level B splash suit and PAPR. The entry team was able to seperate clean packages from contaminated packages as they looked for the leaking one. Contaminated packages were gathered on a peice of visqueen on the floor. Once located, the package in question was opened and two 64oz. bottles of RotoClean were found, one with a broken lid. The main active ingredient in RotoClean was sulfiric acid. At this time it was decided to return the contaminated packages to the contaminated cart where they would remain until a clean-up company arrived on site. USPS personnel already were in touch with the clean-up company. HM7 spread acid nuetralizer to contaminated areas before turning the scene back over to USPS personnel.

Decode for NarcdID: Contamination
NARR Comments: In soils: diesel fuel, heavy oil, carcinogenic PAHs (most notably benzo(a)pyrene), arsenic, lead, with lower concentrations of cadmium and mercury. In groundwater: low concentrations PAHs and BTEX. Site contamination is attributable to two main historical sources: a manufactured gas plant (Pinsch Gas Works) that operated in the northwest site corner in the late 1800s and early 1900s, and rail operations that covered the remaining portion of the site.

Decode for NarcdID: General Site Description
NARR Comments: Portland's main mail processing and distribution center. Located on an approximately 12-block site that is largely covered by buildings, blacktop, and concrete, in a mixed industrial/commercial/residential area. The site is bounded on the south by NW Hoyt St., on the east by NW Broadway Ave., on the west by NW 9th Ave., and on the north by the NW Lovejoy St. ramp/viaduct. Residential units are located across Hoyt St. and across 9th Ave. from the site. The current facility was constructed in 1962 on the site of historic railyards and railroad freight terminals (including a turntable, coal bins, a tin shop, and blacksmith and machine shops). An historic crude oil gasification plant (1890s to 1934) was located at the NW corner of the site. Current facilities include offices and a mail-processing operation, an employee parking structure, open parking lots, and a vehicle maintenance facility. Static groundwater levels at the site have been measured at depths of 10.18 to 14.4 feet.

NARR Comments: Subsurface soils are contaminated with petroleum hydrocarbons (predominantly diesel fuel and heavy oil), PAHs, and metals (predominantly arsenic and lead, with lower concentrations of cadmium and mercury). TPH, PAHs, and VOCs have been detected in groundwater, primarily in the NW site corner and associated with the former Pintsch Gas Works.

NARR Comments: See also information for site #2407 (Union Station-Horse Barn aka Station Place Redevelopment). RI, RA, and FS complete. Staff Report report issued May 3, 2010 recommending remedial action for the site under both an Existing Site Use (continued USPS occupancy) and Hypothetical Future Site Use (redevelopment) scenarios. Under Existing Site Use, maintenance of site cap (paving and buildings) is the primary remedial action. The future use scenario assumes removal of the cap, which would trigger removal of soil hots spots and two UST pockets of contamination, followed by capping of the site. Depending on confirmatory sampling results, a vapor barrier may be required the northwest portion of the site. Under both scenarios, measures would be taken prevent excavation work exposure to site contaminants, and use of groundwater would be prohibited. Record of Decision (ROD) issued by DEQ in July 2010, and draft CMMP issued (in lieu of Remedial Action Plan) in November 2010. DEQ comments on the draft CMMP issued in December 2010, and revised CMMP dated April 2011 approved by DEQ. Cap repair completed by USPS in June 2011. Work approved by DEQ and subsequestly completed. Closure Report submitted and approved in 2012 following revision. Conditional NFA issued 9/25/12 following public comment period. Maintenance of site cover required, and prohibition on groundwater use. Appropriate handling of contaminated media covered under Final Contaminated Media Management Plan dated April 2011 and approved by DEQ.

NARR Comments: Unclear. There were known UST releases at the site, but it seems unlikely that they would be related to subsurface contamination in the area of the site's utility vault. The subsurface contamination could be related to historic railyard activities (including related shop and turntable activities), cargo terminal activities, former crude oil gasification activities (ECSI #1942), or site backfilling activities.

Updated By: DHAFLEY
Updated Date: 03/09/2009
Decode for NarcdID: Media Contamination
NARR Comments: Soil, groundwater, and potentially surface water. Site-wide, shallow soils are impacted from gas plant, railroad, and USPS (vehicle maintenance building) activity. In the NW site corner, contamination extends into the saturated zone. Groundwater contamination in this NW area is present mainly in the shallow (alluvial) aquifer. There was likely past discharge of contaminants to storm sewers and/or abandoned Tanner Creek conduit.

NARR Comments: (8/23/99 JMW/SAP) Added to the Voluntary Cleanup Waiting List July 6, 1999. A preliminary assessment will be completed to determine if lead, petroleum hydrocarbons, or other contaminants are present on the property. (9/26/00 TER/VCP) Under a Letter Agreement with DEQ, the Post Office is conducting a preliminary site investigation, including monitoring well installations. (7/25/03: from DEQ News Release) DEQ and the United States Postal Service have signed an Intergovernmental Agreement for an environmental cleanup investigation of [this] property. Under terms of the agreement, DEQ will provide oversight of further investigation and determination of

US POSTAL SERVICE PROCESSING & DISTRIBUTION CENTER (Continued) **S104657888**

a cleanup remedy for the site. (7/11/05 TER.VCS) Postal Service has conducted additional soil and groundwater investigation and submitted a draft Remedial Investigation Report for DEQ review. (3/9/09) Final Remedial Investigation Report (including risk assessment) was completed in 2006, and a Feasibility Study accepted by DEQ in 2008. A staff report outlining proposed remedial actions for the site under both the Existing Site Use (USPS occupancy) and Hypothetical Future Site Use (redevelopment, including commercial and possible urban residential occupancy) was completed April 30, 2010. The site Record of Decision was signed July 14, 2010. Cap repair was completed in June 2011 at the request. See Summary for discussion of site closeout. Conditional NFA issued September 2012. Last cap inspection June 2013.

US POSTAL SERVICE PROCESSING & DISTRIBUTION CENTER (Continued) **S104657888**

Decode for NarcdID: Site History
NARR Comments: The facility was constructed over a former railyard and rail cargo terminal, which included a turntable, coal bins, a tin shop, blacksmith shop, and machine shop. Parts of the railyard and cargo terminals were constructed on support pilings, over low-lying ground. The low-lying ground was backfilled some time prior to construction of the postal facilities. Tanner Creek historically passed beneath the site (utility vault area) where the heaviest contamination has been encountered. The creek was enclosed in a concrete and brick conduit during the early 1900s-1910s, though. The conduit was of notoriously poor construction; several sections of the conduit subsequently collapsed. The conduit was later abandoned by backfilling with sand. The facility is also located at the former site of a manufactured gas plant (MGP) known as the Pintsch Compressing Company Gas Works. The MGP operated between 1890 and the mid-1930s, manufacturing compressed gas from crude oil for railroad train lighting before the advent of natural gas. In July 1997, during a utility vault construction project, petroleum hydrocarbons and other organic compounds were detected in the soil samples collected from the utility excavation. Investigation on adjacent properties, including the Hoyt Street Railyard, has also encountered petroleum hydrocarbons, volatile organic compounds (VOCs) such as benzene, and polynuclear aromatic hydrocarbons (PAHs). Pockets of subsurface contamination were left in place beneath the distribution facility structure and vehicle maintenance facility following underground storage tank removals (see LUST Files 26-92-0068 and 26-93-6059).

Decode for NarcdID: Current Site Summary Statement
NARR Comments: Former railyard and location of small gas manufacturing facility. Investigation under DEQ identified soil and groundwater impacts, however sit is capped and no significant exposure is occurring (current site use is USPS processing and distribution center). ROD issued in 2010 by DEQ indicating that for current site use existing cap is protective. If site is redeveloped, soil hot spot removal will be necessary. Conditional NFA issued 9/25/12 following public comment period. Maintenance of site cover required, and prohibition on groundwater use. Appropriate handling of contaminated media covered under Final Contaminated Media Management Plan dated April 2011 and approved by DEQ. Yearly cap inspections ongoing, last completed July 2016. PDC has entered into a PPA with DEQ regarding acquisition of property and <quot>takeover<quot> of environment issues under 2010 ROD. DEQ contacted by Portland Development Commission regarding possible site purchase, and entering into Prospective Purchaser Agreement for redevelopment. Draft PPA completed March 31, 2016 and public notice beginning April 1. Under PPA, USPS would continue to occupy property for approximately 2 years after sale (lease-back) while building a new Portland facility, after which PDC would work on redevelopment. Most necessary remedial action would probably be completed by individual sub-parcel owners following guidelines of PPA consent judgment.

Description: Portland Fire & Rescue responded to a HazMat emergency last night at 10:52 PM. The emergence was at 715 NW Hoyt St, the main transfer station for the United States Postal Service in Portland. Upon arrival fire crews found a unknown chemical that leaked out of a package that had gone through the mail. Fire crews immediate called for a HazMat response. USPS employees and fire crews found that the package had come from the airport and backtracked it's path to the facility.
Airport fire crews responded to a secondary site where the package had been transferred and a spill identified. After investigating, Hazmat crews found that the leaking substance was concentrated drain cleaner. The chemical was neutralized and contained at both locations by 12:41 AM.

Environmental Interest/Information System
OR-DEQ (Oregon - Department Of Environmental Quality) is a regulatory agency whose job is to protect the quality of Oregon's Environment. DEQ uses a combination of technical assistance, inspections and permitting to help public and private facilities and citizens understand and comply with state and federal environmental regulations.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and

EPA Region:	10
Classification:	Non-Generator
Description:	Handler: Non-Generators do not presently generate hazardous waste

SETYP (Continued) **1000441937**

Handler Activities Summary:

U.S. importer of hazardous waste:	No
Mixed waste (haz. and radioactive):	No
Recycler of hazardous waste:	No
Transporter of hazardous waste:	No
Treater, storer or disposer of HW:	No
Underground injection activity:	No
On-site burner exemption:	No
Furnace exemption:	No
Used oil fuel burner:	No
Used oil processor:	No
User oil refiner:	No
Used oil fuel marketer to burner:	No
Used oil Specification marketer:	No
Used oil transfer facility:	No
Used oil transporter:	No

Violation Status: No violations found

FINDS:

Registry ID: 110004783324

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Incident Id: 990262
Incident Narrative: DRIVER OF TRACTOR TRAILER RAN OVER AN OBJECT THAT PUNCTURED ONE OF HIS SADDLE TANKS. HE PULLED OFF THE ROAD ONTO A PARKING LOT RIGHT ON TOP OF A CATCH BASIN. ENGINE 1 ARRIVED, ATTEMPTED TO PLUG THE HOLE, SPREAD ABSORBENT MATERIAL ON THE SPILL AND BUILT AN EARTHEN DIKE AROUND THE DRAIN. APPROX 25 GALLONS MAY HAVE WENT INTO THE DRAIN. BUREAU OF ENVIRONMENTAL SERVICES, OERS, AND THE MAINTENANCE BUREAU WERE NOTIFIED. THE DRIVER OF THE VEHICLE MADE ARRANGEMENTS WITH A TRUCK REPAIR COMPANY TO OFFLOAD THE REST OF THE FUEL FROM THE DAMAGED TANK. MT HOOD BEVERAGE WILL BE CONTACTED BY ENVIRONMENTAL SERVICES TO ARRANGE PUMPING OUT THE CATCH BASIN. THIS DRAIN WAS DETERMINED TO FEED INTO A COMBO SEWER/STORM DRAIN SYSTEM.

Environmental Interest/Information System
RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Facility ID: 2012-0399
Incident Status: Archive
Material: Diesel fuel
Quantity: 60
Unit of Measure: Gallons
Release Date: 02/06/2012
Description: Approximately 60 gallons of diesel fuel was released when a tanker truck from Pioneer Oil was refueling an engine between track #5 and the main track at the terminal. Spill was the result of a failed valve gasket. Pioneer oil took responsibility. Amtrak, Union Pacific and Pioneer oil will be meeting tomorrow. Amtrak's Environmental Department coordinates the cleanup efforts (Jeffery White 510-295-7549). The road crew (on site) is 503-586-6197. The release was stopped. A lot of the diesel fuel was contained by placing buckets under the leaking hose but a 10X10 gravel contaminated area remains.

FINDS:

Registry ID: 110069560317

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Environmental Interest/Information System

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Environmental Interest/Information System
US National Pollutant Discharge Elimination System (NPDES) module of the Compliance Information System (ICIS) tracks surface water permits issued under the Clean Water Act. Under NPDES, all facilities that discharge pollutants from any point source into waters of the United States are required to obtain a permit. The permit will likely contain limits on what can be discharged, impose monitoring and reporting requirements, and include other provisions to ensure that the discharge does not adversely affect water quality.

Decode for NarcdID: Contamination
NARR Comments: (6/17/93 KPD) Dreyfus hired PEMCO in June 1992 to perform a Level 1 Site Assessment at its facility. PEMCO found petroleum contamination in a pit at the facility's maintenance shop. The pit (16 x 3.5 x 5 ft.) had a gravel bottom and was used for changing oil. 15 - 20 cubic yards of contaminated soil was removed with a backhoe in October 1992. More could not be reached because of the confined spaces. Two confirmation samples found 62 and 2700 ppm TPH. PEMCO recommended sealing the pit with concrete and leaving the remaining contamination in place. The remaining contamination could be removed if and when the maintenance shop were ever torn down. In addition, two underground storage tanks containing gasoline and diesel were removed from the site at the end of 1991. See LUST Log 26-92-0001 for more information on the tank removal.

NARR Comments: Based on findings from GeoDesign s investigation in 2015 and preceding investigations, Soil in the range of 0 to 5 feet bgs on the northeast corner of the site was excavated and transported to the Hillsboro Landfill (Subtitle D) for disposal. In total, approximately 704 tons of soil were removed and disposed of at Hillsboro Landfill. After completion of the soil removal, additional mass excavation occurred in support of hotel construction from late September through November 2015. Soil removed in this phase of site work met DEQ Clean Fill standards. After completion of all excavation, remaining soil met DEQ risk-based criteria.

Updated Date: 01/03/2017
Decode for NarcdID: Current Site Summary Statement
NARR Comments: (12/30/2016-PRS)The site was used as commercial and office space from at least 1889 until the late 1990 s or early 2000 s when structures were demolished. Subsequently, the site sat vacant until the time environmental investigations began in 2007 and were completed in 2014. The site is now developed as a hotel. Several rounds of investigation were performed in 2007, 2013 and 2015 including groundwater, surface and subsurface soil, and soil gas. Various samples were analyzed for metals, total petroleum hydrocarbons and VOCs. Groundwater is not impacted, is not currently used, and has no expectation of any future use. Detections of VOCs in soil gas samples were below applicable screening values, with the exception of chloroform, which is believed to be unrelated to any site release. Concentrations of metals in soil samples were generally consistent with background with the exception of lead and mercury. Lead and mercury contaminated soil was excavated and disposed at the Hillsboro landfill. Remaining soil met clean fill criteria and was excavated to a depth of 15 feet below ground surface (bgs) for construction site preparation. Confirmation samples taken on sidewalls and floor of the excavation are all below RBCs. The site is currently re-developed as a Hotel with hardscaping covering the entire property footprint. There is no current exposure or opportunity for contact with soil, and remaining soil is documented with only lead above background in one sample, but below the RBC. Based on the foregoing findings, DEQ has issued an NFA determination for the site.

Environmental Interest/Information System
ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and it Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Facility ID:	2016-1696
Incident Status:	Closed
Material:	Oil - Crude
Quantity:	Unknown
Unit of Measure:	UNK
Release Date:	07/16/2016
Description:	Citizen reports while on the Willamette River his boat passed through a sheen estimated to be 50 feet wide by 200 yards long. He further indicated that it smelled like oil (a lot like crude). At the time he saw a train parked on the steel bridge and feels that the oil came from the train. The sheen was near the grain silos but was moving down stream with the current.

Updated By: SFORTUN
Updated Date: 11/13/2012
Decode for NarcdID: Contamination
NARR Comments: No known site contamination. The site was added to the ECSI database based on past operations and the discovery of PCB and PAH contamination in Willamette River sediments near a municipal stormsewer outfall that drains the site location. There was no visual evidence that stormwater catchbasin sediments contain PCB contamination. Subsurface soils near the site's former heating oil LUST may still contain residual petroleum and PAH contamination, although concentrations are believed to be below Risk Based standards (see LUST File #26-02-1215).

Decode for NarcdID: General Site Description
NARR Comments: A 0.79 acre tax lot (Tax Lot 5500 of Township 1 South / Range 1 East Section 03AA) in SE Portland that occupies most of the city block bounded on the west by the Union Pacific Railroad (UPRR) Mainline Right-of-Way and vacated SE 1st Avenue, on the east by SE 2nd Avenue, on the north by SE Belmont Street, and on the south by SE Yamhill Street. The site is occupied by a trapezoidal, 22,500 square foot, commercial warehouse structure located on the northern 2/3 of the tax lot, with an attached, square, 3,200 square foot, two-story office structure on the southeast corner of the lot. A blacktop-paved parking area, with access to two of the warehouse s overhead loading dock doors, occupies the remaining, southwestern + of the site. Additional overhead loading dock doors are located along the warehouse s eastern, northern, and western exterior walls. An approximate 8-foot wide, 60-foot long landscaping strip lies along the western edge of the parking lot. Jersey barriers and chain-link fencing separate the landscaped strip from vacated SE 1st Avenue and the UPRR Right-of-Way.

NARR Comments: A June 2006 site reconnaisance by Point Source Solutions LLC (Phase I Environmental Site Assessment) found no obvious evidence of hazardous substance releases at the site or on the adjoining UPRR Right-of-Way. A heating oil was released was discovered at a LUST along the site's southern property line (LUST #26-06-1215) in 2006. The tank appears to have been decommissioned in place with no indication of a soil cleanup. DEQ closed the LUST site in September 2006. The LUST file should be examined to to verify that soils at the tank site were analyzed for PAH contamination.

NARR Comments: Accumulated sediments within the site's stormwater catchbasins have not been analyzed to determine if PCBs may have been released to local stormsewer mains, although a June 2006 Level I Assessment of the facility found no visual evidence of releases. An historic heating oil tank along the site's southern property line leaked

CONSOLIDATED ELEC. DISTRIBUTORS WAREHOUSE (FORMER) (Continued) **S112058059**

heating oil to subsurface soils. The site's LUST file should be examined if there is any question about the concentrations of residual PAHs in subsurface soils.

NARR Comments: Site stormwater drains to the Willamette River both upstram and downstream from the Morrison Bridge, at City Outfalls #35 and #36, Oregon Highway Division outfall WR#316, and possibly Oregon Highway Division outfall WR#315. Contaminants reaching the river via stormsewers could represent an ecological risk for the river's aquatic life, and a potential human health risk for individuals consuming fish caught from the river. Subsurface soils at a former LUST along the site's southern property line may be contaminated with petroleum and PAHs. If present, elevated PAH concentrations could represent a potential direct dermal contact risk for future utility trench workers or construction workers.

NARR Comments: Point Source Solutions, LLC conducted a visual reconnaisance inspection of the site in June 2006 as part of its Phase I Environmental Site Assessment for Borrego Springs Bank. Point Source Solutions observed no Recognized Environmental Conditions (RECs) during its site inspection. A leaking heating oil UST was investigated along the site's southern property line in 2006 (LUST #26-06-1215). The tank was evidently decommissioned in place, apparently without the need for a soil cleanup. DEQ closed the LUST file in September 2006.

NARR Comments: There are records of nine production wells within about 1/2 mile of the site, although only two appear to be located cross-gradient, or downgradient, from the site. The nearest well appears to be located directly across SW Belmont Street from the site. Current use of that well is unknown, and it is unclear if the well even still exists. Current use of the eight remaining wells is also unknown. The nearest known drinking water supply well is located about 0.65-mile upgradient, and is unlikely to be affected by any potential on-site contamination. Local groundwater probably drains to the Willamette River and supplementallly supports aquatic life within the river.

Decode for NarcdID: Site History
NARR Comments: 1889: undeveloped land 1901: depot for farm engines, threshers, and saw mill equipment; the facility had a forge (southern half of property undeveloped) 1909: Two warehouses storing machinery and agricultural implements (occupied entire property). 1924-1950: northern warehouse stored machinery (Feenaughty Machine Co., agricultural implements)(Gardner-Denver Co., road machinery); southern warehouse occupied by a fruit products company (Starr Fruit Products). 1950's: occupied by a transportation line (DeLapp), bulb company (Mt. Angel Bulb Co.), and machinery and engine manufacturing operations (Pioneer Engine Works; Four Wheel Drive Auto Co.; Roberts Bros.). In 1959-61, site buildings were demolished for construction of a nearby, elevated Morrison Bridge ramp / I-5 off-ramp. 1962: new commercial building constructed on the site. Early occupants of the existing commercial building included an electrical supplies distributor (Consolidated Electrical Distributors; 1970-74 through 2006; currently located at 2555 NW Nicolai Street, Portland), a

CONSOLIDATED ELEC. DISTRIBUTORS WAREHOUSE (FORMER) (Continued) **S112058059**

commercial and industrial heating and air conditioning equipment distributor (Nor-Air, Inc.; 1965-70 through 1975-80; currently located across SE 2nd Avenue from the subject site), and wholesale rug and carpet companys (Walter DN&E Co. and Cascade Sales Co.; 1962 through 1965-70). 1990: a two-story affice building was added to the southeast corner of the property. A 2000-gallon underground heating oil tank was added to the site in 1945, although there are no records to indiacte whether, or not, the tank was ever removed. Site facilities are currently heated with natural gas. Through at least 1924, site facilities were steam-heated. 2006 - A Phase I Environmental Site Assessment was completed for the site by Point Source Solutions, LLC, prior to sale to TKMInvestment Properties, LLC. 2006 - A leak was discovered at the site's 2000-gallon heationg oil UST (LUST #26-02-1215). Up to 10,000 ppm diesel fuel and 15,000 ppm heating oil were detected in subsurface soils. The tank was evidently decommissioned in place without a soil cleanup since petroleum concentrations were below Risk Base standards.

Decode for NarcdID: Current Site Summary Statement
NARR Comments: [Nov. 2012] This property was added to the ECSI database as a potential source of PCB contamination found in Willamette R. sediments near a municipal outfall that drains the site area.

 No obvious indications of hazardous substance releases were observed during a June 2006 site reconnaisance, although accumulated sediments within site storm drains were not sampled or analyzed.

 A leaking underground heating oil tank (LUST #26-06-1215) was apparently decommissioned in place at the site in 2006. Soils near the tank were contaminated with diesel fuel and heating oil, but below Risk Based Concentrations. DEQ closed the LUST file in September 2006 and made a no-further-action decision for the site in Nov. 2012.

GOVERNMENT RECORDS SEARCHED / DATA CURRENCY TRACKING

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

STANDARD ENVIRONMENTAL RECORDS

Federal NPL site list

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Federal Delisted NPL site list

Delisted NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Federal CERCLIS list

FEDERAL FACILITY: Federal Facility Site Information listing

A listing of National Priority List (NPL) and Base Realignment and Closure (BRAC) sites found in the Comprehensive Environmental Response, Compensation and Liability Information System (CERCLIS) Database where EPA Federal Facilities Restoration and Reuse Office is involved in cleanup activities.

Date of Government Version: 04/03/2019

SEMS: Superfund Enterprise Management System

SEMS (Superfund Enterprise Management System) tracks hazardous waste sites, potentially hazardous waste sites, and remedial activities performed in support of EPA's Superfund Program across the United States. The list was formerly know as CERCLIS, renamed to SEMS by the EPA in 2015. The list contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). This dataset also contains sites which are either proposed to or on the National Priorities List (NPL) and the sites which are in the screening and assessment phase for possible inclusion on the NPL.

Federal CERCLIS NFRAP site list

SEMS-ARCHIVE: Superfund Enterprise Management System Archive

SEMS-ARCHIVE (Superfund Enterprise Management System Archive) tracks sites that have no further interest under the Federal Superfund Program based on available information. The list was formerly known as the CERCLIS-NFRAP, renamed to SEMS ARCHIVE by the EPA in 2015. EPA may perform a minimal level of assessment work at a site while it is archived if site conditions change and/or new information becomes available. Archived sites have been removed and archived from the inventory of SEMS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list the site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. The decision does not necessarily mean that there is no hazard associated with a given site; it only means that. based upon available information, the location is not judged to be potential NPL site.

Federal RCRA non-CORRACTS TSD facilities list

RCRA-TSDF: RCRA - Treatment, Storage and Disposal
RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

ADDITIONAL ENVIRONMENTAL RECORDS

Local Brownfield lists

US BROWNFIELDS: A Listing of Brownfields Sites
Brownfields are real property, the expansion, redevelopment, or reuse of which may be complicated by the presence or potential presence of a hazardous substance, pollutant, or contaminant. Cleaning up and reinvesting in these properties takes development pressures off of undeveloped, open land, and both improves and protects the environment. Assessment, Cleanup and Redevelopment Exchange System (ACRES) stores information reported by EPA Brownfields grant recipients on brownfields properties assessed or cleaned up with grant funding as well as information on Targeted Brownfields Assessments performed by EPA Regions. A listing of ACRES Brownfield sites is obtained from Cleanups in My Community. Cleanups in My Community provides information on Brownfields properties for which information is reported back to EPA, as well as areas served by Brownfields grant programs.

US CDL: Clandestine Drug Labs
A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

EPA WATCH LIST: EPA WATCH LIST

EPA maintains a "Watch List" to facilitate dialogue between EPA, state and local environmental agencies on enforcement matters relating to facilities with alleged violations identified as either significant or high priority. Being on the Watch List does not mean that the facility has actually violated the law only that an investigation by EPA or a state or local environmental agency has led those organizations to allege that an unproven violation has in fact occurred. Being on the Watch List does not represent a higher level of concern regarding the alleged violations that were detected, but instead indicates cases requiring additional dialogue between EPA, state and local agencies - primarily because of the length of time the alleged violation has gone unaddressed or unresolved.

2020 COR ACTION: 2020 Corrective Action Program List

The EPA has set ambitious goals for the RCRA Corrective Action program by creating the 2020 Corrective Action Universe. This RCRA cleanup baseline includes facilities expected to need corrective action. The 2020 universe contains a wide variety of sites. Some properties are heavily contaminated while others were contaminated but have since been cleaned up. Still others have not been fully investigated yet, and may require little or no remediation. Inclusion in the 2020 Universe does not necessarily imply failure on the part of a facility to meet its RCRA obligations.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

Date of Government Version: 12/31/2009

RMP: Risk Management Plans

When Congress passed the Clean Air Act Amendments of 1990, it required EPA to publish regulations and guidance for chemical accident prevention at facilities using extremely hazardous substances. The Risk Management Program Rule (RMP Rule) was written to implement Section 112(r) of these amendments. The rule, which built upon existing industry codes and standards, requires companies of all sizes that use certain flammable and toxic substances to develop a Risk Management Program, which includes a(n): Hazard assessment that details the potential effects of an accidental release, an accident history of the last five years, and an evaluation of worst-case and alternative accidental releases; Prevention program that includes safety precautions and maintenance, monitoring, and employee training measures; and Emergency response program that spells out emergency health care, employee training measures and procedures for informing the public and response agencies (e.g the fire department) should an accident occur.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing
A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

Date of Government Version: 10/19/2006

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

US AIRS (AFS): Aerometric Information Retrieval System Facility Subsystem (AFS)

The database is a sub-system of Aerometric Information Retrieval System (AIRS). AFS contains compliance data on air pollution point sources regulated by the U.S. EPA and/or state and local air regulatory agencies. This information comes from source reports by various stationary sources of air pollution, such as electric power plants, steel mills, factories, and universities, and provides information about the air pollutants they produce. Action, air program, air program pollutant, and general level plant data. It is used to track emissions and compliance data from industrial plants.

ABANDONED MINES: Abandoned Mines

An inventory of land and water impacted by past mining (primarily coal mining) is maintained by OSMRE to provide information needed to implement the Surface Mining Control and Reclamation Act of 1977 (SMCRA). The inventory contains information on the location, type, and extent of AML impacts, as well as, information on the cost associated with the reclamation of those problems. The inventory is based upon field surveys by State, Tribal, and OSMRE program officials. It is dynamic to the extent that it is modified as new problems are identified and existing problems are reclaimed.

EDR HIGH RISK HISTORICAL RECORDS

EDR Exclusive Records

EDR MGP: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

EDR Hist Auto: EDR Exclusive Historical Auto Stations

EDR has searched selected national collections of business directories and has collected listings of potential gas station/filling station/service station sites that were available to EDR researchers. EDR's review was limited to those categories of sources that might, in EDR's opinion, include gas station/filling station/service station establishments. The categories reviewed included, but were not limited to gas, gas station, gasoline station, filling station, auto, automobile repair, auto service station, service station, etc. This database falls within a category of information EDR classifies as "High Risk Historical Records", or HRHR. EDR's HRHR effort presents unique and sometimes proprietary data about past sites and operations that typically create environmental concerns, but may not show up in current government records searches.

South Map:	6067228 LAKE OSWEGO, OR
Version Date:	2014

EDR’s GeoCheck Physical Setting Source Addendum is provided to assist the environmental professional in forming an opinion about the impact of potential contaminant migration.

Assessment of the impact of contaminant migration generally has two principle investigative components:

1. Groundwater flow direction, and
2. Groundwater flow velocity.

Groundwater flow direction may be impacted by surface topography, hydrology, hydrogeology, characteristics of the soil, and nearby wells. Groundwater flow velocity is generally impacted by the nature of the geologic strata.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW DIRECTION INFORMATION

Groundwater flow direction for a particular site is best determined by a qualified environmental professional using site-specific well data. If such data is not reasonably ascertainable, it may be necessary to rely on other sources of information, such as surface topographic information, hydrologic information, hydrogeologic data collected on nearby properties, and regional groundwater flow information (from deep aquifers).

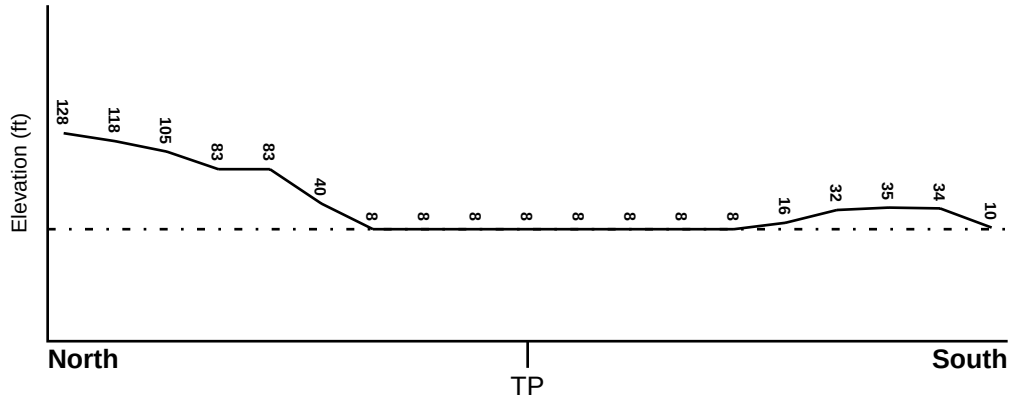
TOPOGRAPHIC INFORMATION

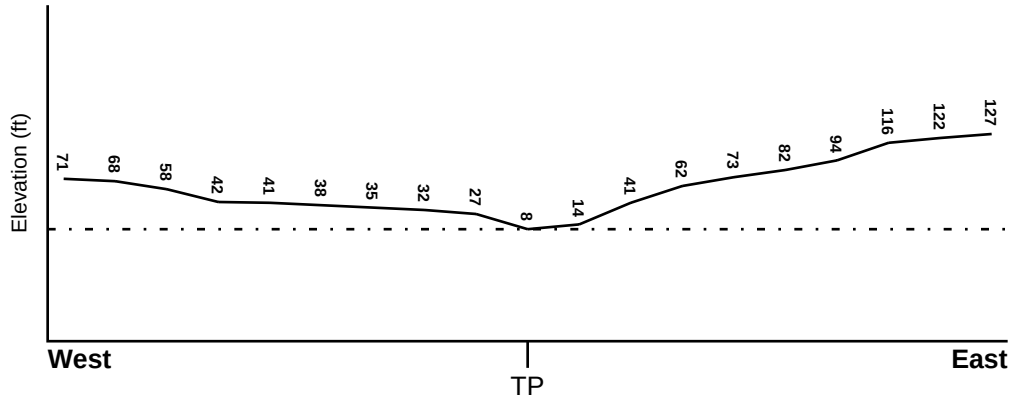
Surface topography may be indicative of the direction of surficial groundwater flow. This information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

TARGET PROPERTY TOPOGRAPHY

General Topographic Gradient: General West

SURROUNDING TOPOGRAPHY: ELEVATION PROFILES





Target Property Elevation: 8 ft.

0 1/2 1 Miles

Source: Topography has been determined from the USGS 7.5' Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

HYDROLOGIC INFORMATION

Surface water can act as a hydrologic barrier to groundwater flow. Such hydrologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

Refer to the Physical Setting Source Map following this summary for hydrologic information (major waterways and bodies of water).

FEMA FLOOD ZONE

Flood Plain Panel at Target Property	FEMA Source Type
4101830093E	FEMA FIRM Flood data

Additional Panels in search area:	FEMA Source Type
4101830091E	FEMA FIRM Flood data
4101830035D	FEMA Q3 Flood data
4101830040C	FEMA Q3 Flood data

NATIONAL WETLAND INVENTORY

NWI Quad at Target Property	NWI Electronic Data Coverage
PORTLAND	YES - refer to the Overview Map and Detail Map

HYDROGEOLOGIC INFORMATION

Hydrogeologic information obtained by installation of wells on a specific site can often be an indicator of groundwater flow direction in the immediate area. Such hydrogeologic information can be used to assist the environmental professional in forming an opinion about the impact of nearby contaminated properties or, should contamination exist on the target property, what downgradient sites might be impacted.

AQUIFLOW®

Search Radius: 1.000 Mile.

EDR has developed the AQUIFLOW Information System to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted by environmental professionals to regulatory authorities at select sites and has extracted the date of the report, groundwater flow direction as determined hydrogeologically, and the depth to water table.

MAP ID	LOCATION FROM TP	GENERAL DIRECTION GROUNDWATER FLOW
Not Reported		

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

GROUNDWATER FLOW VELOCITY INFORMATION

Groundwater flow velocity information for a particular site is best determined by a qualified environmental professional using site specific geologic and soil strata data. If such data are not reasonably ascertainable, it may be necessary to rely on other sources of information, including geologic age identification, rock stratigraphic unit and soil characteristics data collected on nearby properties and regional soil information. In general, contaminant plumes move more quickly through sandy-gravelly types of soils than silty-clayey types of soils.

GEOLOGIC INFORMATION IN GENERAL AREA OF TARGET PROPERTY

Geologic information can be used by the environmental professional in forming an opinion about the relative speed at which contaminant migration may be occurring.

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

DOMINANT SOIL COMPOSITION IN GENERAL AREA OF TARGET PROPERTY

The U.S. Department of Agriculture's (USDA) Soil Conservation Service (SCS) leads the National Cooperative Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. The following information is based on Soil Conservation Service SSURGO data.

Soil Map ID: 1

Soil Component Name: Water

Soil Surface Texture:
Hydrologic Group: Not reported

Soil Drainage Class:
Hydric Status: Unknown

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 2

Soil Component Name: Urban land

Soil Surface Texture:
Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:
Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

Soil Map ID: 3

Soil Component Name: Pilchuck

Soil Surface Texture: sand

Hydrologic Group: Class A - High infiltration rates. Soils are deep, well drained to excessively drained sands and gravels.

Soil Drainage Class: Somewhat excessively drained

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Moderate

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

Soil Layer Information

	Boundary			Classification		Saturated hydraulic conductivity micro m/sec	Soil Reaction (pH)
Layer	**Upper**	**Lower**	**Soil Texture Class**	**AASHTO Group**	**Unified Soil**		
1	0 inches	11 inches	sand	Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1
2	11 inches	59 inches		Granular materials (35 pct. or less passing No. 200), Silty, or Clayey Gravel and Sand.	COARSE-GRAINED SOILS, Sands, Sands with fines, Silty Sand.	Max: 141 Min: 42	Max: 7.3 Min: 6.1

Soil Map ID: 4

Soil Component Name: Urban land

Soil Surface Texture: sand

Hydrologic Group: Class D - Very slow infiltration rates. Soils are clayey, have a high water table, or are shallow to an impervious layer.

Soil Drainage Class:

GEOCHECK® - PHYSICAL SETTING SOURCE SUMMARY

Hydric Status: Not hydric

Corrosion Potential - Uncoated Steel: Not Reported

Depth to Bedrock Min: > 0 inches

Depth to Watertable Min: > 0 inches

No Layer Information available.

LOCAL / REGIONAL WATER AGENCY RECORDS

EDR Local/Regional Water Agency records provide water well information to assist the environmental professional in assessing sources that may impact ground water flow direction, and in forming an opinion about the impact of contaminant migration on nearby drinking water wells.

HYDROGEOLOGIC INFORMATION

AQUIFLOW[R] Information System
Source: EDR proprietary database of groundwater flow information
EDR has developed the AQUIFLOW Information System (AIS) to provide data on the general direction of groundwater flow at specific points. EDR has reviewed reports submitted to regulatory authorities at select sites and has extracted the date of the report, hydrogeologically determined groundwater flow direction and depth to water table information.

GEOLOGIC INFORMATION

Geologic Age and Rock Stratigraphic Unit
Source: P.G. Schruben, R.E. Arndt and W.J. Bawiec, Geology of the Conterminous U.S. at 1:2,500,000 Scale - A digital representation of the 1974 P.B. King and H.M. Beikman Map, USGS Digital Data Series DDS - 11 (1994).

STATSGO: State Soil Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
The U.S. Department of Agriculture's (USDA) Natural Resources Conservation Service (NRCS) leads the national Conservation Soil Survey (NCSS) and is responsible for collecting, storing, maintaining and distributing soil survey information for privately owned lands in the United States. A soil map in a soil survey is a representation of soil patterns in a landscape. Soil maps for STATSGO are compiled by generalizing more detailed (SSURGO) soil survey maps.

SSURGO: Soil Survey Geographic Database
Source: Department of Agriculture, Natural Resources Conservation Service (NRCS)
Telephone: 800-672-5559
SSURGO is the most detailed level of mapping done by the Natural Resources Conservation Service, mapping scales generally range from 1:12,000 to 1:63,360. Field mapping methods using national standards are used to construct the soil maps in the Soil Survey Geographic (SSURGO) database. SSURGO digitizing duplicates the original soil survey maps. This level of mapping is designed for use by landowners, townships and county natural resource planning and management.

Certified Sanborn® Map Report

06/14/19

Site Name:	Client Name:
EQRB	Parametrix, Inc.
Burnside Bridge	700 NE Multnomah
Portland, OR 97232	Portland, OR 97232
EDR Inquiry # 5679238.3	Contact: Kelly Carini

The Sanborn Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. The Sanborn Library is the largest, most complete collection of fire insurance maps. The collection includes maps from Sanborn, Bromley, Perris & Browne, Hopkins, Barlow, and others. Only Environmental Data Resources Inc. (EDR) is authorized to grant rights for commercial reproduction of maps by the Sanborn Library LLC, the copyright holder for the collection. Results can be authenticated by visiting www.edrnet.com/sanborn.

The Sanborn Library is continually enhanced with newly identified map archives. This report accesses all maps in the collection as of the day this report was generated.

Environmental Data Resources, Inc. (EDR) Aerial Photo Decade Package is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's professional researchers provide digitally reproduced historical aerial photographs, and when available, provide one photo per decade.

EDR Topographic Map Library has been searched by EDR and maps covering the target property location as provided by Parametrix, Inc. were identified for the years listed below. EDR's Historical Topo Map Report is designed to assist professionals in evaluating potential liability on a target property resulting from past activities. EDRs Historical Topo Map Report includes a search of a collection of public and private color historical topographic maps, dating back to the late 1800s.

EXECUTIVE SUMMARY

DESCRIPTION

Environmental Data Resources, Inc.'s (EDR) City Directory Abstract is a screening tool designed to assist environmental professionals in evaluating potential liability on a target property resulting from past activities. EDR's City Directory Abstract includes a search and abstract of available city directory data. For each address, the directory lists the name of the corresponding occupant at five year intervals.

Business directories including city, cross reference and telephone directories were reviewed, if available, at approximately five year intervals for the years spanning 1924 through 2014. This report compiles information gathered in this review by geocoding the latitude and longitude of properties identified and gathering information about properties within 660 feet of the target property.

A summary of the information obtained is provided in the text of this report.

RECORD SOURCES

EDR's Digital Archive combines historical directory listings from sources such as Cole Information and Dun & Bradstreet. These standard sources of property information complement and enhance each other to provide a more comprehensive report.

EDR is licensed to reproduce certain City Directory works by the copyright holders of those works. The purchaser of this EDR City Directory Report may include it in report(s) delivered to a customer. Reproduction of City Directories without permission of the publisher or licensed vendor may be a violation of copyright.
